INSTRUCTIONS

500

GENERAL: Send an original copy of the application, exhibits and ~~\$250.00~~ fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.
- 13a Give (1), the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.
- 13b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 13c Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.
- 13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.
- 14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)

Exhibit A

Origin and Breeding History of Coker 48

Year	
1966	Coker 258 was crossed with Coker 319. (C-258 X C-319)
1966-67	F ₁ plants grown in Florida winter breeding nursery and a selected plant was back-crossed with Coker 319. (C-258xC-319) X C-319
1967	F ₁ plants grown in summer breeding nurseries and selection #67-394-4S was advanced to 1968 tests.
1968	F ₂ progeny row reselected in summer breeding nurseries and selection #68-358-1S was advanced to 1969 tests.
1969	F ₃ progeny row reselected in summer breeding nurseries and selection #69-272-1S was advanced to 1970 tests.
1970	F ₄ progeny row reselected in summer breeding nurseries and selection # 70-172-1S was advanced to 1971 tests.
1971	F ₅ progeny row reselected in summer breeding nurseries and selection # 71-84-2C was advanced to 1972 tests.
1972	F ₆ progeny row reselected in summer breeding nurseries and selection # 72-191-3S was advanced to 1973 tests.
1973	F ₇ progeny row reselected in summer breeding nurseries and progeny row # 73-48E was advanced to 1974 tests.
1974	F ₈ progeny rows tested in Coker's Pedigreed Seed Company Advanced Strains-Variety Test and Regional Small Plot Tests as Coker 73-48E.
1975	F ₉ progeny rows were tested in Coker's Pedigreed Seed Company Advanced Strains-Variety Tests and Regional Farm Tests.
1976	F ₁₀ progeny rows were tested in Coker's Pedigreed Seed Company Advanced Strains-Variety Test and Regional Farm Tests and it was determined that Coker 48 was a stable line that met the minimum standards as established by the Variety Evaluation Committee of the Tobacco Workers Conference.
1977	Seed increases were made from bulked seed of a selected F ₁₀ progeny row and the resulting F ₁₁ seed were harvested.

Throughout the development of Coker 48, each generation of each progeny row was grown from seed of an individual plant selection.

7800008

The breeding nurseries in which this variety was produced are severely infested with either the blackshank, Granville (bacterial) Wilt, and/or root knot organisms. Leaves were harvested, identified, cured, and graded, and chemically analyzed from every progeny row throughout the entire development period.

Variants: No variants have been observed throughout the regional testing and increase period.

Evidence of Stability: Coker 48 has remained phenotypically stable throughout its advanced testing and increase period. Progeny rows from the variety are of the same phenotype, maturity, height, yield and quality, and exhibit the same disease resistance reactions.

Exhibit B.

Novelty Statement

Summary Novelty Statement: Coker 48 most closely resembles Coker 258~~x~~in both leaf size and shape, and particularly in the puckered leaf texture. Coker 48 differs most obviously from Coker 258 by the fact that Coker 48 is susceptible to the root-knot nematode Meloidogyne incognita (a simply inherited characteristic) whereas Coker 258 is resistant.

Two other varieties, Coker 86 and NC 95, resemble Coker 258 in that both have a puckered leaf texture but both of these varieties are also resistant to the root-knot nematode Meloidogyne incognita.
